

Junior Product Manager

Job description:

In your role as Junior Product Manager you work closely with the CO2 Systems Product Managers. You, together with the relevant Product Manager, supervise the entire quotation process until the order has been confirmed. In view of the extreme technical complexity of the systems and installations you begin with a thorough induction programme which includes internal and external courses. At the end of your training period you serve as the engineering *and* commercial contact person for the customers. You answer their questions, and you explain the installations and quotations to the customers. After the conformation of the order you transfer the order to the Project Management in the appropriate manner. You also maintain contacts with the various agents and sales offices all over the world, and you encourage and support their operations.

Your profile:

You have completed a course in the mechanical engineering or chemical technology fields or equivalent. You are of higher vocational (HBO) level, and have an affinity with commercial process. In view of the complex engineering of the installations experience with process engineering, refrigerating engineering and PLCs is an advantage. You have a verbal and written command of Dutch, English and German. A command of French and Spanish is an advantage. You have a driven, commercial attitude, a heart for the business, and a service-oriented, proactive attitude. In addition, you are able to work in autonomy, exhibit perseverance, and possess excellent communicative and social skills. You find occasional (international) business trips appealing.
