

## Project Manager, CO<sub>2</sub> Systems

**Job description:** After a thorough induction period you fulfil the role of Project Manager responsible for the realization of your CO<sub>2</sub> recovery installation projects. You bear the final responsibility for the quality, engineering and finances of the installations from the time the order is accepted right through to the successful commissioning. You engineer the projects in person, and you prepare the process diagrams. You use this information to manage the work carried out on the project by internal drawing office and control technology department, as well as by the various suppliers. You maintain regular contacts with international customers throughout the projects. You prepare engineering management reports specifying the use of materials and hours, disruptions to projects, the feasibility of the planning, the quality, and finances.

**Your profile:** You have completed a course at Institute of Technology (HTS) level, preferably in mechanical engineering or processing engineering. If you do not have knowledge of refrigerating engineering, process engineering and/or PLC control systems then you are prepared to study these subjects to acquire the necessary expertise. You have a verbal and written command of English and German. In addition to your engineering skills you are also a skilled organizer. This position offers career development to the position of Project Manager, a position which also involves occasional short business trips.

You have an energetic and decisive personality, are practically-minded, and are able to work in autonomy. You possess excellent communicative skills and can convince others with arguments. In addition, you exhibit a positive attitude and a proactive attitude to your work.
