

## **Maintenance Technician international**

### **Job description:**

As Maintenance Technician you are responsible for the implementation of preventive and corrective maintenance of CO<sub>2</sub>- recovery plants and / or Units (for e.g. the carbonization of beer and soft drinks) on location. Incidentally on-site assembly and commissioning of CO<sub>2</sub>-recovery plants and units can be part of your job.

As most of our customers are located outside the Netherlands you frequently spend consecutive periods abroad (up to several weeks).

In your function as maintenance technician, you give instructions and advice, make spare parts proposals and submit the recommendations, identify problems, and report back to the organization. You report to the Manager Service CO<sub>2</sub> systems.

### **Your profile:**

Your work and knowledge level is compatible with MTS-level, preferably MTS completed with training in the direction of Mechanical or Electrical Engineering. Knowledge of refrigeration, process and Siemens S7 PLC/Allen Bradley is a plus. You dominated the English and German language in word and writing. You have good communication skills, can convince people through arguments, and have a positive attitude and a pro-active work.
